

Cost Control Wheel

06

Quick Tender

Quick Tender is for suppliers only. It allows suppliers to receive enquiry notifications on either a web-based application or mobile app. Suppliers can track order and payment status should a buying organization wish to offer such information via the Supplier Portal.

05

Reverse Auction

Reverse Auctions are an advanced purchasing technique that can save 15-20% compared to regular buying methods. RA's are appropriate to strategic commodities and services – high volume yet regular purchases, bought from equally qualified suppliers – reducing your Cost of Goods Sold.

04

Supplier Portal

Suppliers from your Approved Supplier List register on your website, and start receiving enquiries automatically by email. Suppliers can upload quotes, and respond to queries from one place. With the Sealed Bid option, you can restrict quotes from being opened until the bidding period ends.

01

Requisition

Achieve extraordinary efficiency by digitizing Requests and Approvals. Maintain a digital internal catalog of products and services, for easy point-and-click requisitioning. Easily enforce your internal controls such as authorization limits, multiple signatory approvals, and attach quotes and supporting documents. Collaborate with your team via instant messaging. Securely authorize from Gmail, Microsoft Outlook, or mobile app.

02

Smart Cost Tracking

Visually track price movements for key commodities or parts, and evaluate supplier performance at a glance-prior to approving new purchases. Track employee, branch and team 'actual versus planned' behavior. Visually track requisitions in real-time throughout the organization.

03

Artificial Intelligence

The revolutionary AI module allows Supply Zone to act autonomously on your behalf. The three autonomous modes are AutoRequest, AutoApprove and AutoFlag. Detect unusual requisition patterns, and odd buying activity for closer inspection. Gain better visibility and control over materials and expenditure, small and large.
